While on one side of the table is the Purism Librem 5 Linux smartphone on the high-price/high-end side, the Pine64 folks continue working on the PinePhone as a lower-end Linux smartphone. A new video now shows the PinePhone running on Linux 5.0 with Wayland's Weston.

Earlier this week was Purism showing off the state of their software on the Librem 5 developer kit while coincidentally now is a video showing off the PinePhone running on the Linux 5.0 kernel with Wayland's Weston compositor.
