- [Cardlings looks to be an interesting turn-based strategy with an usual gameplay style](#) [2]

Cardlings caught my attention recently, a unique turn-based strategy game from Clockwork Chilli that's confirmed to be releasing for Linux on June 5th.

What's interesting about it, is the way the turns work. While one player is doing combat and movement, the other player has the chance to get building and gathering resources. To make it even more unique, only the player doing movement and combat can end the turn and then it's reversed. So this means the player doing the moment, will want to end the turn quickly so the other player doesn't get tons of resources and buildings set up. The developer said this "results in very intense, fast-paced games that still preserve all the depth of more traditional turn-based strategy titles".

- [Incredibly weird comedy point and click adventure 'Clam Man' is out](#) [3]

Clam Man from Team Clam is a new comedy adventure game, it just recently released with Linux support. It's a point and click adventure, although it has a focus on the story rather than pushing you through puzzles.

- [Comedy adventure Nelly Cootalot: Spoonbeaks Ahoy! HD is now out with Linux support](#) [4]

Originally released in 2007, Nelly Cootalot: Spoonbeaks Ahoy! HD revamps the experience to make it less painful to play on modern systems with full Linux support.

- [Unique gravity-defying metroidvania 'Dandara' finally sees an update to the Linux version](#) [5]

Dandara, a very unique take on the action metroidvania genre took me by surprise with the fun gameplay last month and now the Linux version is actually up to date.

The main problem, as noted in the previous article, was that the Linux version of Dandara hadn't seen any updates since release. The developer, Long Hat House, actually emailed in last night to note that the whole game has been updated and they've managed to now get the Linux version on equal footing too.

- [Steam Play updated again to 4.2-5 to include newer DXVK, networking and controller fixes](#) [6]

Valve have pushed out the latest smaller update to Steam Play, this time including an updated DXVK and a bunch of fixes for various games.

- [The Linux demo for 'Eagle Island', a very slick action-adventure rogue-lite is out and it's extremely impressive](#) [7]

Ever since I first heard of Eagle Island I was basically in love, with super slick pixel-art and an owl you throw as your weapon? Sign me up.

The demo just recently went live on Steam, including for Linux and after giving it a go I've come away from it extremely impressed. It works beautifully and it looks gorgeous, probably one of the best demos I've played for some time. I even joked about the demo splash-screen missing a Linux icon with the developer on Twitter, which they took it rather well as they just haven't yet found a good one to use.

- [Very cool deck-building roguelike Dicey Dungeons alpha ending soon, last chance for early price + updated](#) [8]

Dicey Dungeons might just be one of my favourite indie games this year, a unique blend of an usual roguelike with an ability system powered by cards and dice rolls.

- [A look at what's on sale ahead of the weekend once again, come find your next game](#) [9]

The weekend is almost upon us and you're in the market for a fresh new game, I've got you covered with what deals are going currently.

● [Cardlings looks to be an interesting turn-based strategy with an unusual gameplay style](#)^[10]
