[Vimrc Tutorial](#) [8]

In this article, we're going to dive deep into the vimrc file of Vim. Once you're inside the vimscript, it's easy to mess things up. That's why this rule of thumb will always be helpful in your journey with Vim. Don't put any line in vimrc that you don't understand.

- [CPU atomics and orderings explained](#) [9]

Sometimes the question comes up about how CPU memory orderings work, and what they do. I hope this post explains it in a really accessible way.

- [You can't say Go without Google ? specifically, our little logo, Chocolate Factory insists](#) [10]

Back in 2009, Google chose to name its latest programming language Go, a decision that is still giving it a migraine

It could have called it "Google Go" to avoid confusion with Frank McCabe's Go! programming language. Despite criticism, it didn't do so. After almost a year of online grumbling, Google software engineer Russ Cox, in 2010, closed GitHub Issue #9, dismissing the complaints as "unfortunate."

And the headaches over the thing's name still won't go away (no pun intended.) Last week, Google rebuffed a request to remove its logo from the Go website, golang.org, a change supported by some developers who feel Google takes Go developers for granted.
