With the recent release of Mozilla Firefox 68 there are some nice WebRender performance improvements that Linux users can enjoy. But with Firefox 69 now in beta there is even better performance, including when enabling WebRender on Linux.

Given the recent Firefox 68.0 release and Firefox 69.0 being promoted to beta, I ran some fresh browser benchmarks for checking out the current state of Mozilla's Linux performance from the Ubuntu desktop. The official Mozilla Firefox binaries for Linux x86_64 67.0.4, 68.0, and 69.0b3 were tested on the same system in a variety of browser benchmarks.
