Today we are looking at the latest snapshot of ArcoLinux 19.07.11. We are looking at the main, edition, the XFCE release. It is based on Arch Linux, Linux Kernel 5.2, XFCE 4.12 and it uses about 600MB of ram when idling.

When I look at ArcoLinux, I can see just how much the developer loves this project and how much work he is putting into it. ArcoLinux is clearly one of the best looking, and working great.
