After a well deserved summer break, the Kdenlive community is happy to announce the first major release after the code refactoring. This version comes with a big amount of fixes and nifty new features which will lay the groundwork for the 3 point editing system planned for this cycle. The Project Bin received improvements to the icon view mode and new features were added like the ability to seek while hovering over clips with the mouse cursor and now it is possible to add a whole folder hierarchy. On the usability front the a menu option was added to reset the Kdenlive config file and now you can search for effects from all tabs instead of only the selected tab. Head to our download page for AppImage and Windows packages.
