Coming three and a half months after the OTA-9 release, the Ubuntu Touch OTA-10 update is now available with better hardware compatibility for Fairphone 2, Nexus 5, and OnePlus One smartphones by implementing proper camera orientation and audio routing on the Fairphone 2, and fixing audio and video sync problems on the Fairphone 2 and OnePlus One.

Additionally, Ubuntu Touch OTA-10 improves the reliability and speed of Wi-Fi based geolocation functionality by removing the "wolfpack" tool, which used the Geoclue service for gathering approximate location data. However, it may take more than 20 minutes for some users to have their location retrieved after updating to Ubuntu Touch OTA-10.
