- [The Next SUSE CaaS Platform is Here!](#) [2]

The SUSE CaaS Platform team is excited to announce the availability of our new version 4 ? a container management solution that is easier to deploy and manage at scale, richer than ever in security and control, and ready with the latest innovations!

- [SUSE Bolsters Security, Advanced Networking in SUSE CaaS Platform 4](#) [3]

SUSE has revamped its SUSE CaaS Platform with a wide range of updates, including advanced networking for Kubernetes that will make it easier to configure networking with the platform, and has also bolstered its SUSE Cloud Application Platform with refinements such as improved user interface features.

The biggest improvement to SUSE Container as a Service (CaaS) Platform 4, which is built for application developers, DevOps teams and Kubernetes container platform operators, is the new advanced networking for Kubernetes which is being brought in via the Cilium open source project, according to SUSE. Cilium works to transparently secure network connectivity between application services deployed using Linux container management platforms like Docker and Kubernetes.
