Announcing Kanidm - A new IDM project

By *Rianne Schestowitz*

Created *18/09/2019 - 5:45pm*

Submitted by Rianne Schestowitz on Wednesday 18th of September 2019 05:45:32 PM Filed under [Red Hat](#) [1]

Today I'm starting to talk about my new project - Kanidm. Kanidm is an IDM project designed to be correct, simple and scalable. As an IDM project we should be able to store the identities and groups of people, authenticate them securely to various other infrastructure components and services, and much more.

You can find the source for kanidm on github.

For more details about what the project is planning to achieve, and what we have already implemented please see the github.
