## [Compromised AWS API Key Allowed Access to Imperva Customer Data](#) [2]

Imperva has shared more information on how [attackers] managed to obtain information on Cloud Web Application Firewall (WAF) customers, and revealed that the incident involved a compromised administrative API key.

•

## [Oil Refiner Reports Major IT Incident in Finland](#) [3]

It's not yet clear whether the cause is a malfunction or a cyber attack, according to spokeswoman Susanna Sieppi. The issue is under investigation, and it's too early to estimate when the systems will be fixed, she said by phone.

## [Ubuntu Releases Patch for Major `sudo` Security Exploit](#) [5]

Canonical has issued an urgent security fix to the `sudo` package in the Ubuntu archives following the discovery of a major security flaw.

A critical fix has rolled out to all users of Ubuntu 16.04 LTS, 18.04 LTS, 19.04 and 19.10 (and one assumes Ubuntu 14.04 ESR too) ? just run a `sudo apt upgrade` to install it.

But what about the flaw inquisition? Well, if you're yet to hear about it I appreciate meditative disconnect from social media. The oft toxic waste pools of chatter were with wet with alarm ? some manufactured, the rest well weighted ? over CVE-2019-14287 when it was announced yesterday, October 14.

- [Security updates for Tuesday](#) [6]

Security updates have been issued by Debian (`sudo` and `xtrlock`), openSUSE (`sudo`), Red Hat (Single Sign-On), Slackware (`sudo`), SUSE (`binutils`, `dhcp`, `ffmpeg`, `kernel`, `kubernetes-salt`, `sudo`, and `tcpdump`), and Ubuntu (`sudo`).
