As we reported earlier this month, KDE Plasma Mobile is already running well on the PinePhone, but not all things are working properly, such as phone calls, which the Plasma Mobile team reports that they managed to add multiple patches to integrate telephony functions with the graphical UI.

"Bhushan Shah submitted multiple patches in postmarketOS to integrate telephony functions with user interface. Using which PINE64 Pinephone can connect calls from user interface. Currently audio is a work in progress however, and we hope to have this resolved soon," said the Plasma Mobile team.
