Calculate Linux released version 20 at the end of 2019 with major updates and is based off Gentoo. Calculate Linux Desktop (CLD) includes a wizard to configure a connection to Calculate Directory Server. According to their download page, "Calculate Linux Desktop is listed in the Russian Software Register." To sum that up, CLD is a distro from Russia, based off Gentoo, and designed to connect to a Calculate Directory Server. What is a Calculate Directory Server? Well according to their website, "Calculate Directory Server (CDS) is an advanced, LDAP-based authentication server designed to be a domain controller for business networks."
