NODE, a hardware hacker, has developed a modular Linux PC dubbed "Zero Terminal 3" with a touchscreen, a full-size USB 2.0 port, a micro SD socket, and in-built battery running on \$5 Raspberry Pi Zero single-board computer.

Aimed at DIY enthusiasts, Zero Terminal 3 is a very versatile device that brings tonnes of options when it comes to adding add-ons to reach its true potential. The developer calls these addons "backpacks" and offers users several options to extend the functionality of the device.
