According to StatCounter, 70% of all desktop users worldwide use Google Chrome as their default Internet browser. A sad fact, as Chrome is a proprietary web browser that does not respect the user privacy by default. Chromium however, is %100 open source and licensed under the BSD license. Chrome extensions do work on Chromium.

Still, we do not recommend any user who cares about his/her privacy to use Google Chrome or Chromium, as both browsers are full of Google's integrated services which phonehome some of your data, besides their horrible default settings for privacy which block nothing by default. Instead, we recommended using Firefox, but if you still want a Chromium-based browser to use (Whether for performance or because of the huge number of extensions? etc), then what we recommend is the Ungoogled-Chromium browser instead.

However, what can't be completely reached shouldn't be completely left; Here's a list of 7 privacy-preserving extensions to have if you are still going to use Chrome/Chromium browsers anyway. Or maybe you can even use them with the Ungoogled-Chromium browser, which is a better choice.
