The Kobo Clara HD is an eReader with a 6 inch E Ink display and Kobo's software designed for reading eBooks. But thanks to a new work-in-progress port of postmarketOS for the device, you can now use the Kobo Clara HD as a Linux tablet with an E Ink display.

That could make this device, which sells for \$120, a much more versatile gadget. That said, there are always going to be some limitations when running desktop or mobile applications on devices with E Ink displays, and installing the Linux-based postmarketOS does require opening the case and replacing the pre-installed software, so there is a chance that you may mess up your device. So proceed with caution.
