Back in 2019, Pine64 announced that it was working on a \$25 Linux smartwatch. It turns out \$25 was a little optimistic because, as [OMG! Ubuntu!](#) reports, the PineTime has now launched carrying a \$29.99 price tag. I think we can all forgive Pine64 for charging an extra \$5, and the current Community launch price is only \$26.99.

Keeping in mind how little this smartwatch costs, you're getting a device that weighs 38 grams and is made from a mix of zinc alloy and plastic. The display is a 1.3-inch IPS touch screen panel with a 240-by-240 pixel resolution and 65,000 colors. The internal memory consists of 64KB of RAM, 512KB of Flash system storage, and 4MB of additional flash storage. The watch is powered by a 64MHz ARM Cortex-M4F as part of the Nordic Semiconductor nRF52832 SoC.
