Most smartphones ship with software capable of taking advantage of all the device's hardware. But the PinePhone isn't most smartphones. It's designed to be an open platform for developers and when it first began shipping there was only some very basic software available.

Among other things, there was no working camera app. Now there is. And up until recently there had also been no good method for recording video on a PinePhone. But now redditor UJC_theguy has come up with a method for recording 720p video at 30 frames per second.
