With SELinux technology it's possible to confine not only system processes (as it's by default used in Fedora, CentOS and Red Hat Enterprise Linux) but also Linux users. We call this feature SELinux confined users.

- [Mozilla VPN Client Audit Results Published](#) [7] [Ed: They should check not the client but [the VPN servers](#) [8]]

Mozilla announced the completion of an independent audit of client software for connecting to the Mozilla VPN service. The audit analyzed a stand-alone client application written using the

Qt library and delivered for Linux, macOS, Windows, Android and iOS. Mozilla VPN is powered by over 400 servers from Swedish VPN provider Mullvad in over 30 countries. The connection to the VPN service is made using the WireGuard protocol .
