The PinePhone is a smartphone from Pine64 designed as an affordable device capable of running free and open source operating systems including postmarketOS, UBports Ubuntu Touch, Sailfish, Mobian, and Manjaro.

While it has entry-level hardware, it also has some features that are uncommon on modern smartphones, including a removable battery (which can be replaced with any Samsung J7 form factor battery) and hardware kill switches that can disable the mic, cameras, or wireless features of the phone when you need more privacy.

Aimed at developers and early adopters, the PinePhone is not generally available year-round, but Pine64 makes limited quantities available in batches several times per. You can find more details in the spec table blow, or check out Pine64?s PinePhone website and Wiki.
