The image shows the Canonical logo, which consists of the word "CANONICAL" in a white, sans-serif font. The letter "O" is stylized as a circle with a horizontal line through its center. A small "TM" trademark symbol is located to the right of the word. The logo is centered on a solid purple rectangular background.

Canonical (the company behind Ubuntu) made an important announcement this week. Said announcement was that its managed services had achieved MSP Cloud Verify Certification (MSPCV). According to the company, "The certification further strengthens Canonical's industry-leading open source offering, reassuring customers in all industries that they can securely consume open source in a regulated fashion that complies with all the industry standards and best practices."

Canonical also mentioned in its PR material that 85% of enterprise businesses have an open source mandate to increase agility and reduce costs.

At the same time, Canonical announced the availability of Ubuntu Livepatch on-prem, which is an enhancement to the Ubuntu Livepatch service and provides the basis for an efficient, but fine-tuned continuous vulnerability management

on private, hybrid or public clouds.
