If you're looking for a secure laptop computer, you have several options. Thumb readers, facial recognition, and built-in encryption all offer considerable security. But these features ? typically backed up by the operating system ? are prone to failure, one way or another. For example, facial recognition can be bypassed using various techniques.

Purism is a company that assembles Linux computers, complete with a secure operating system and hardware kill switches. These features ? while eschewing potential points of entry found on other laptops ? make Purism laptops particularly attractive to any user concerned about online privacy and security.
