A little-known monitoring and management software for Linux virtual machines in Microsoft's Azure cloud should be patched as soon as possible to avoid exploitation of critical and serious remote code execution and privilege escalation vulnerabilities, researchers warn.

Unbeknownst to Azure customers, Microsoft automatically deploys the open source Open Management Infrastructure agents for Linux instances, security firm Wiz said.

Windows 11 is no longer compatible with the immensely popular Oracle VirtualBox

virtualization platform after Microsoft changed its hardware requirement policies for virtual machines.
