Last Saturday we had an improvised NeoChat mini development sprint in a small hotel room in Berlin in the occasion of the 25th anniversary of KDE. In a good KDE tradition, Carl spent this time on improving NeoChat settings. He ported both the NeoChat general settings and the specific room settings to the new Kirigami.CategorizedSetting component. Tobias fixed a lot of papercuts and now the power level should be fetched correctly, we show the number of joined users instead of joined+invited users in the room information pane, the user search is now case insensitive. Nicolas focused on fixing our Android build by making the spellchecking feature compile on Android.
