Linux distributions have multiple ways of delivering software to their users. But which one should you go for? stability or the latest software?

One of the major choices that many Linux users face when choosing a Linux distribution is its stability, or how much the software changes.

Some distros favor stable, tried-and-true software while others will include newer software that may not be as reliable, also known as "bleeding-edge," a play on "cutting-edge."

So, which one should you choose? Let's find out.
