Any Web site owner knows the value of traffic statistics, but finding the right Web statistics package is not as easy as it may seem. Of course, there are excellent packages such as AWStats, Modlogan, and Webalizer, but these applications are overkill for people running smaller Web sites. Moreover, you can't install them if your Web hosting provider doesn't allow you to use custom scripts. If you are in the market for an easy-to-use program that provides essential Web traffic information, you might want to take a closer look at phpMyVisites.

The phpMyVisites installation script does all the dirty work for you, unlike many PHP/MySQL-based applications, which often require you to gather information and tweak configuration files manually. According to phpMyVisites, the installation procedure consists of nine steps and takes about 10 minutes. In reality, it's possible to perform the installation procedure even faster.

Now, let's take a look at what phpMyVisites has to offer.
