Linux distributions have virtually all of the amenities that desktop users want, but moving from Windows to Linux is still a bit of a challenge for users who need to migrate their settings and files to a new desktop. Versora's Progression Desktop utility is designed to copy a user's settings and files from Windows to Linux, mitigating the hassles that come with migration. It's still a bit rough around the edges, but it's a major step toward making it easier to move to Linux.

Progression Desktop handles settings in common applications such as Microsoft Word, Outlook, and Internet Explorer. It also handles user desktop settings such as desktop wallpaper and mouse and keyboard settings. Finally, it also helps automate copying files from the Windows desktop to the target Linux machine.

Using Progression Desktop on Windows
