In recent days there has been quite a few dangerous exploits found in linux kernels, all the while grsecurity and selinux was not vuln. Both can be difficult to configure but in my opinion grsecurity is easier as its compiled in the kernel and you can select between three different levels of security among other custom optimizations.

grsecurity is an innovative approach to security utilizing a multi-layered detection, prevention, and containment model.

Here I will explain in copy and paste format how to compile and install the Grsecurity patch for the latest kernel.
